

50K PA Account Trading Rules

Print this page and keep it next to your screen. The goal is not to maximize today's profit. The goal is to protect the account long enough to collect payouts consistently.

1. I trade one setup only: ICT CISD with higher-timeframe bias.
2. No trades before my bias is confirmed.
3. Risk per trade is fixed at \$100.
4. I do not change position size during the session.
5. Maximum two trade attempts per day.
6. Daily max loss = \$100. If hit, platform closed.
7. After the first loss, I wait at least 15 minutes before considering another trade.
8. I never trade to recover losses.
9. I never increase size because I am down.
10. I never increase size because I am up.
11. My job is to follow the process, not force profits.
12. If a trade is valid, I let it work. I do not close winners out of fear.
13. I manage risk, not profit.
14. Targets are determined before entry.
15. If my target is the high/low of day before entry, it remains the target after entry.
16. One surviving funded account is more valuable than one emotional trading day.
17. Missing a trade is acceptable. Breaking rules is not.
18. My goal is consistent payouts, not excitement.

Pre-Market Checklist

- Bias confirmed
- Risk fixed at \$100
- Daily loss limit acknowledged
- Max two attempts today
- No size changes allowed
- Target defined before entry

Trading Mantra

A single trade does not matter. A single day does not matter. Protecting the account and collecting payouts is the business.
